## **Annex E2 – Technical Statement**

Manhole covers and grates, manufactured by SAV SISTEM in composite material, may be used outdoor and inside industrial facilities following available norms and standards. The products will normally function in a temperature interval of -35°C and +60°C. During the installing process, temperatures up to 180°C can be reached and they will not affect the products functionality.

SAV SISTEM's manhole covers and grates, manufactured in composite material, comply with related Romanian legislation and associated norms (EN124) as the Romanian law request, in the limit of inn contract inserted certificates that correspond also with a part of the common EU legislation available today in different countries and geographical areas.

SAV SISTEM's all products have an expected time life of 40 years in normal using conditions. The expected life time is widely based on the expertise and the experience of the raw material suppliers since the composite covers are a relatively new product in the market space. It is, however, only to be used as a guide as, whilst in practice it could be compromised by many factors including incorrect installing procedures, traffic values, maintenance conditions.
